

I subscribe to satellite radio so I can hear a good selection of music, news, and my traffic reports. I pay for the service also so I do not have a lot of commercials. I do not think that any service XM wants to offer should be regulated by the government. You are in our business way too much as it is. What is the problem with having traffic and weather, if you think about it, it helps congestion because if I know that a road has a crash or construction, I can avoid it.
Get a clue.
